Module 1: Evaluation

This quiz evaluates **critical thinking**, **factual knowledge**, and **ethical reasoning** from **Module 1: Introduction to Artificial Intelligence**

1 Essay 5 points

Scenario: A school uses AI to automatically assign grades based on student behavior and performance data.
Question: What are some ethical concerns with this approach?

2 True or False 1 point

A self-driving car using computer vision is an example of Deep Learning.

- ◯ True
- ◯ False

3 Essay 5 points

Scenario: A company uses an AI chatbot to replace human customer service agents.
Question: What are the potential social and economic impacts of this decision?

4 Multiple Choice 1 point

In which year was the term “Artificial Intelligence” first coined?

- 1956
- 1950
- 1980
- 1965

Clear my selection

5 Multiple Choice 1 point

Which is a real-world example of ML in healthcare?

- Sending appointment reminders
- Using training data to detect cancer in X-rays
- Calculating patient bills
- Writing prescriptions

Clear my selection

6 Essay 2 points

List two differences between Machine Learning and Deep Learning.

7 Multiple Choice 1 point

Which of these AI tools is best associated with image recognition?

- Symbolic reasoning
- Deep learning neural networks
- Heuristic search
- Traditional logic programming

Clear my selection

8 Essay 2 points

Describe what an intelligent agent is. Give an example from a real-world system.

9 True or False 1 point

All AI systems are designed with ethical frameworks.

- ◯ True
- ◯ False

10 Multiple Choice 1 point

Which best describes the relationship between AI, ML, and DL?

- ◯ ML = AI = DL
- ◯ DL ⊂ ML ⊂ AI
- ◯ AI ⊂ ML ⊂ DL
- ◯ ML ⊂ DL ⊂ AI

Clear my selection

11 True or False 1 point

Neural networks are designed to simulate the human brain's structure.

- ◯ True
- ◯ False

12 True or False 1 point

AI today can match human general intelligence across all domains.

- ◯ True
- ◯ False

13 Multiple Choice 1 point

Which ethical concern is most related to biased training data in AI?

- ◯ Fairness
- ◯ Speed of execution
- ◯ Overfitting
- ◯ Lack of transparency

Clear my selection

14 Essay 5 points

Scenario: A facial recognition system in a public space is used for law enforcement.
Question: What are two potential benefits and two ethical risks of this use of AI?

15 Essay 2 points

What is one ethical challenge that arises from using AI in hiring or admissions?

16 Multiple Choice 1 point

Which of the following best describes Artificial General Intelligence (AGI)?

- A self-driving car
- An AI system that can generalize learning across different tasks like a human
- A chatbot that responds to FAQs
- A calculator that performs complex math

Clear my selection

17 Essay 5 points

Scenario: A self-driving car must choose between hitting a pedestrian or swerving into a wall, potentially harming the driver.
Question: Discuss this from an AI ethics perspective. What principles should guide this decision, and who should be accountable?

18 Essay 2 points

In your own words, define Machine Learning. Provide one example of how it is used in a STEM field.

19 Multiple Choice 1 point

Which of the following is NOT a component of an intelligent agent?

- Sensors
- Emotions
- Actuators
- Decision-making mechanism

Clear my selection

20 Multiple Choice 1 point

Who is credited with the concept of the Turing Test?

- Marvin Minsky
- Alan Turing
- John McCarthy
- Geoffrey Hinton
